How to Configure Discord Server Settings

Step-by-step setup with screenshots • 14 steps • Automatic method

For Discord server administrators. The screenshots come from a test environment; use the production address in Step 1. The wizard always requires your review and confirmation before making Discord changes.

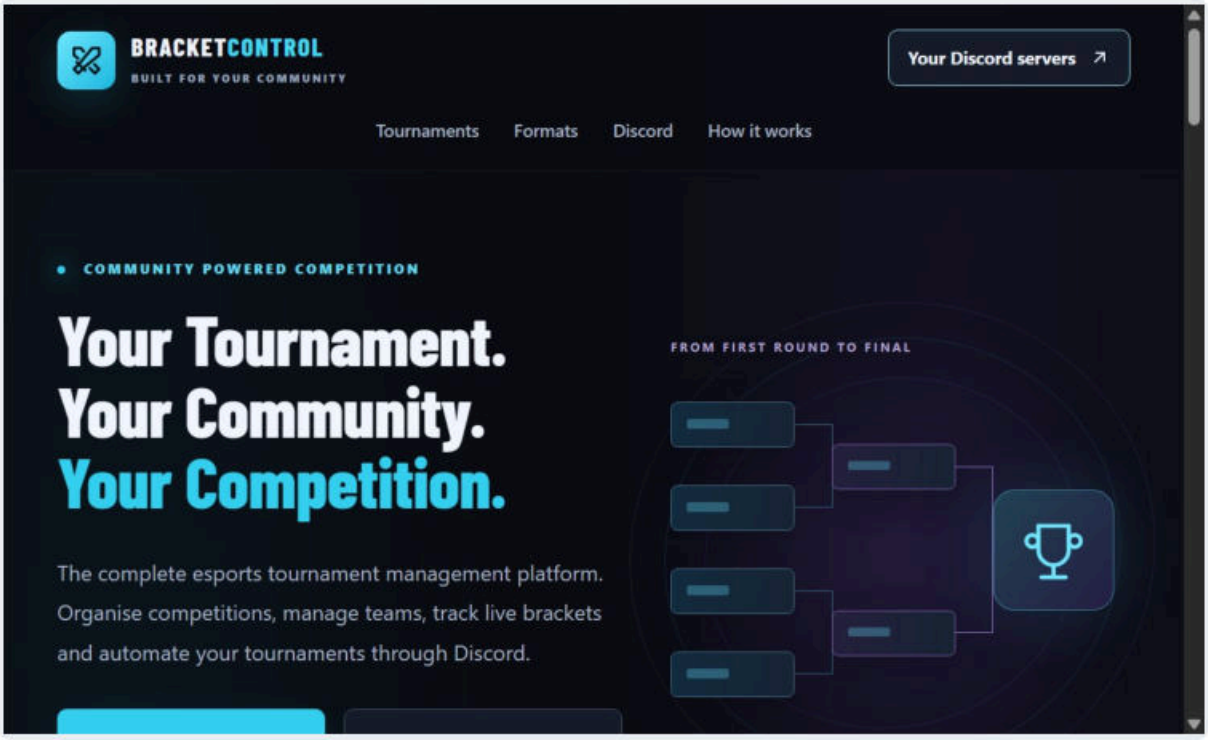

1 Open Bracket Control

Go to app.devdylnz.com/app and sign in with your Discord account.

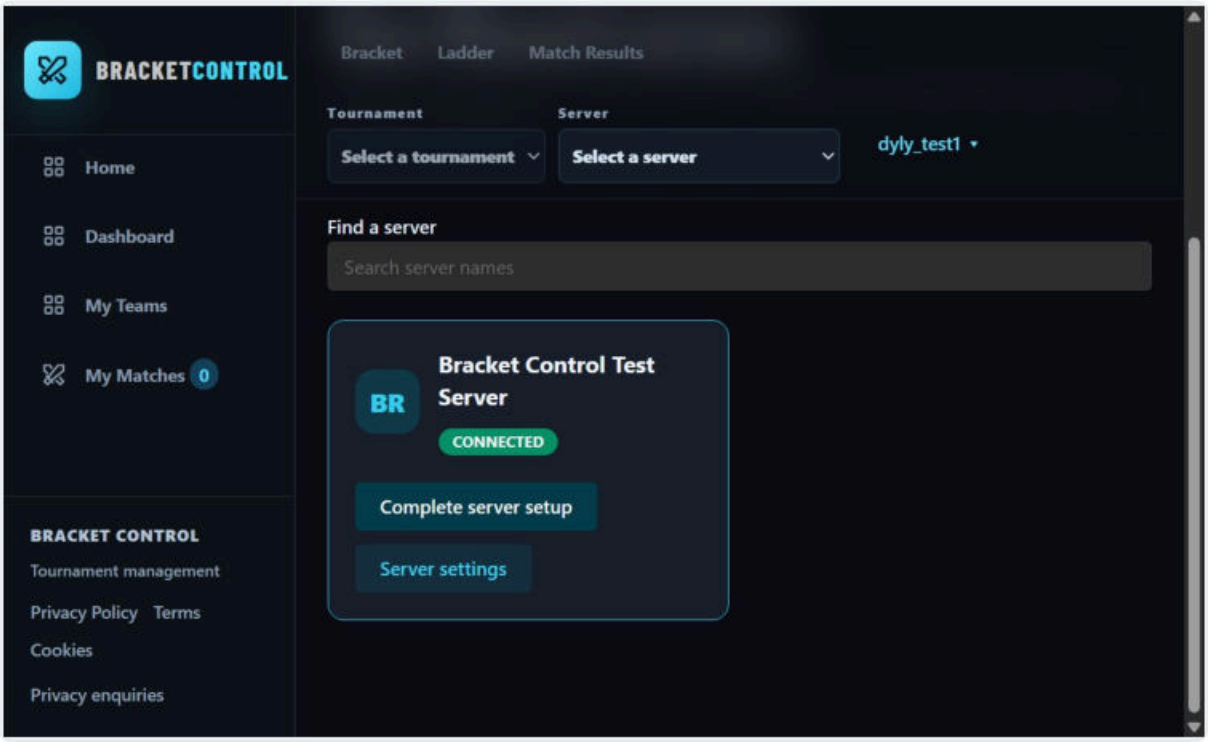

2 Open your Discord servers

On the Bracket Control home page, select Your Discord servers.

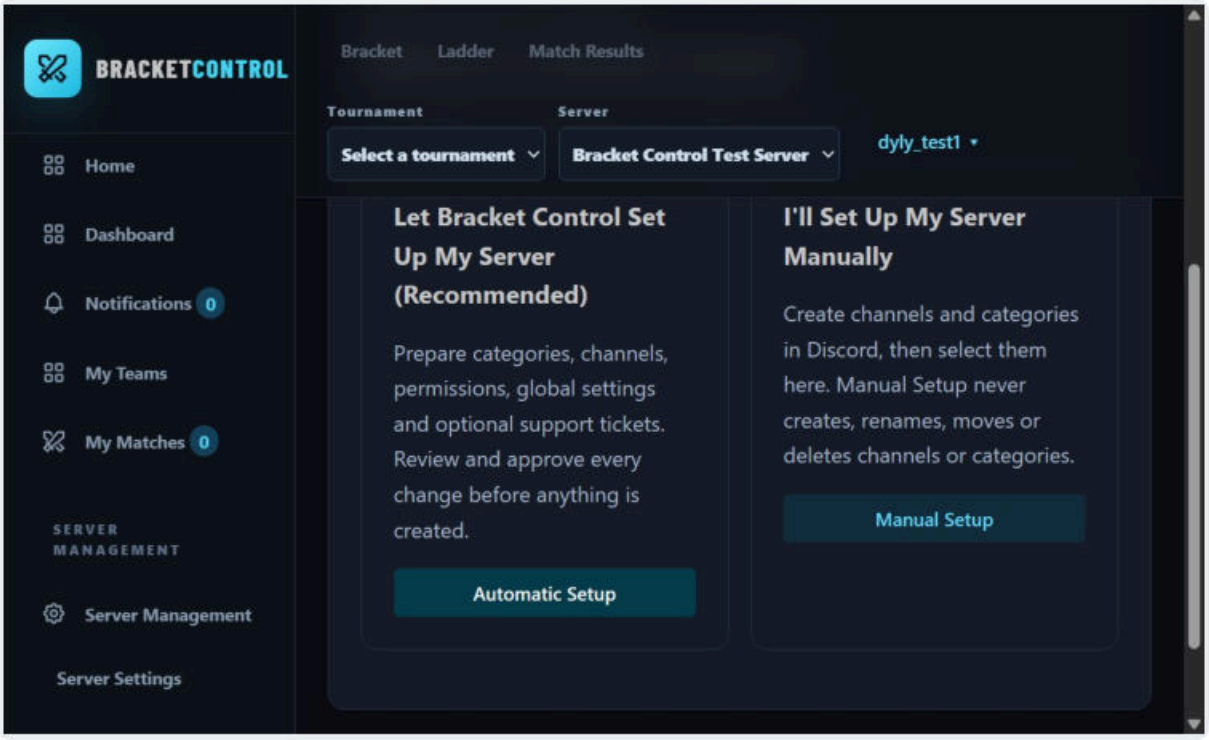

3 Continue server setup

Select Complete server setup for the connected server. New installations should open the wizard automatically.

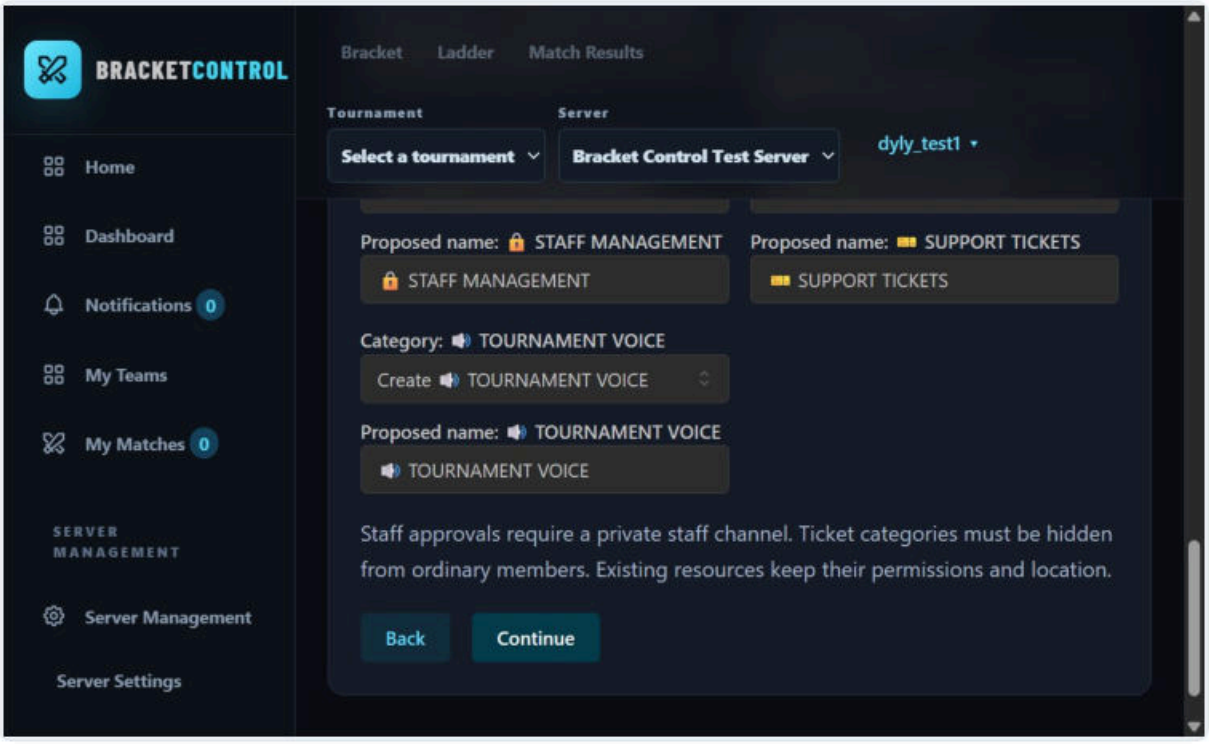

4 Choose Automatic Setup

Select Automatic Setup to have Bracket Control prepare the Discord resources for your review.

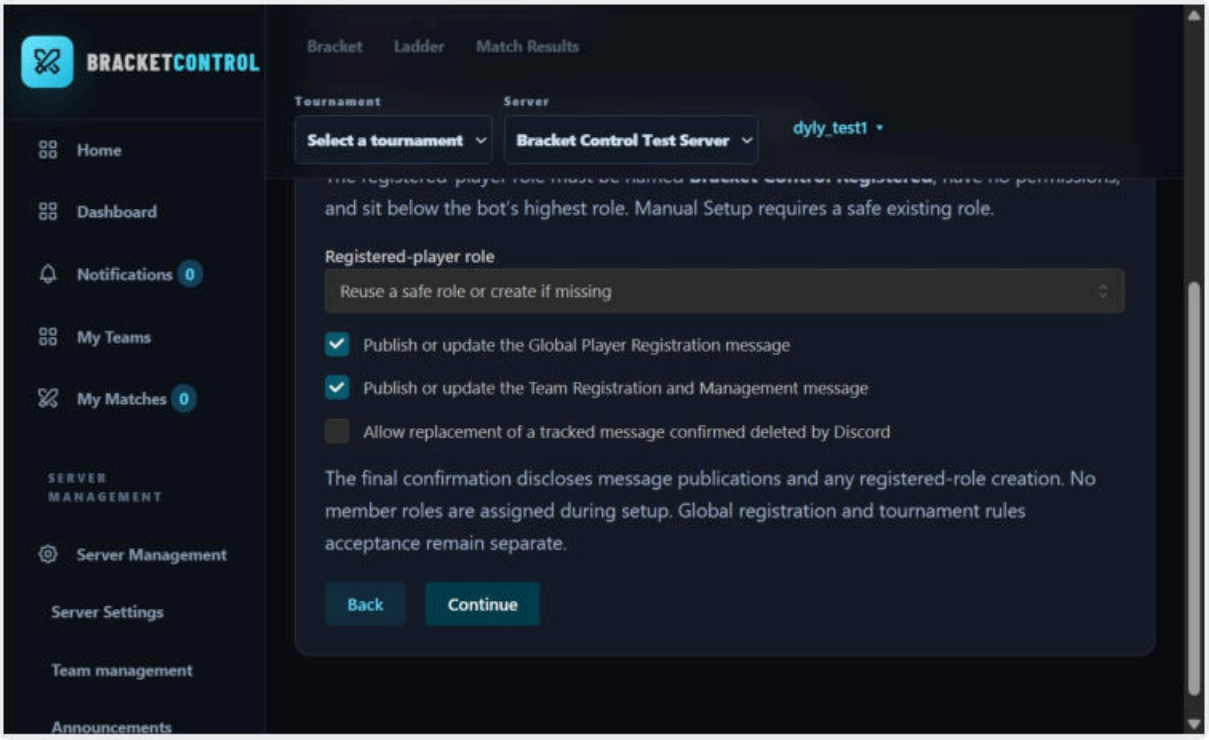

5 Review channels and categories

Check all proposed destinations and names. Global Player Registration and Team Registration are separate. Select Continue.

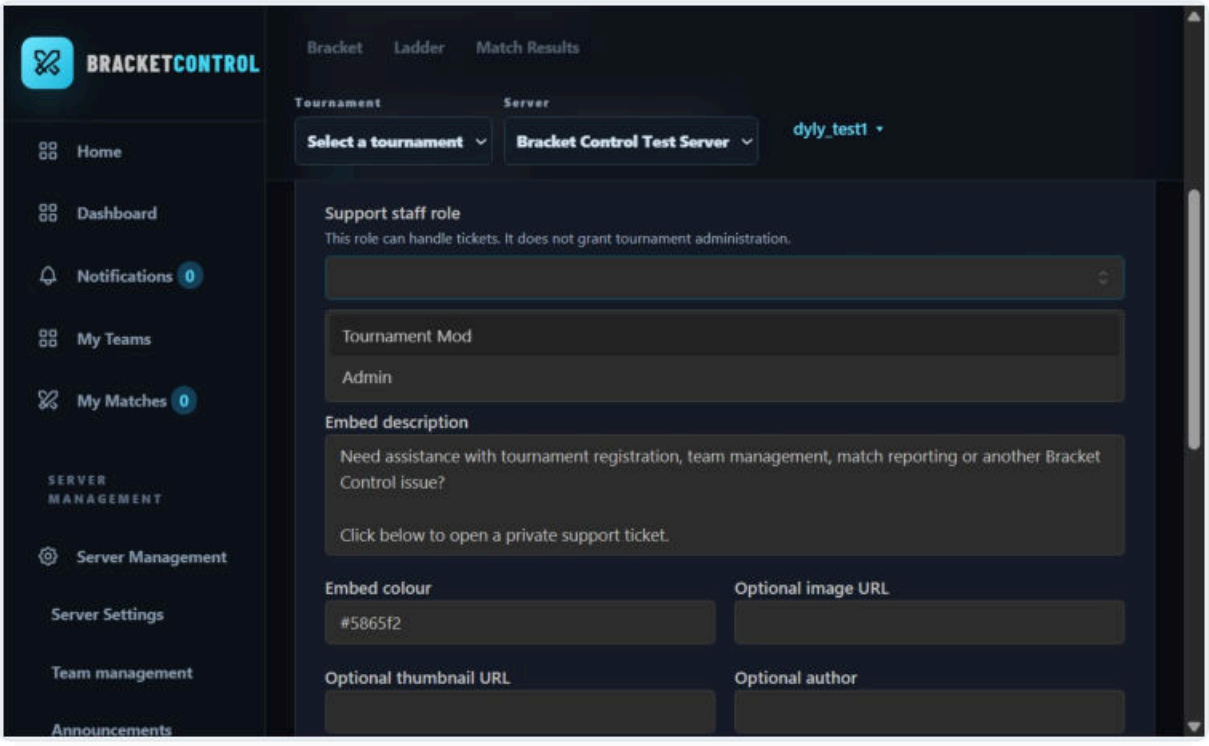

6 Review role and announcements

Confirm the registered-player role and choose which registration messages to publish. Select Continue.

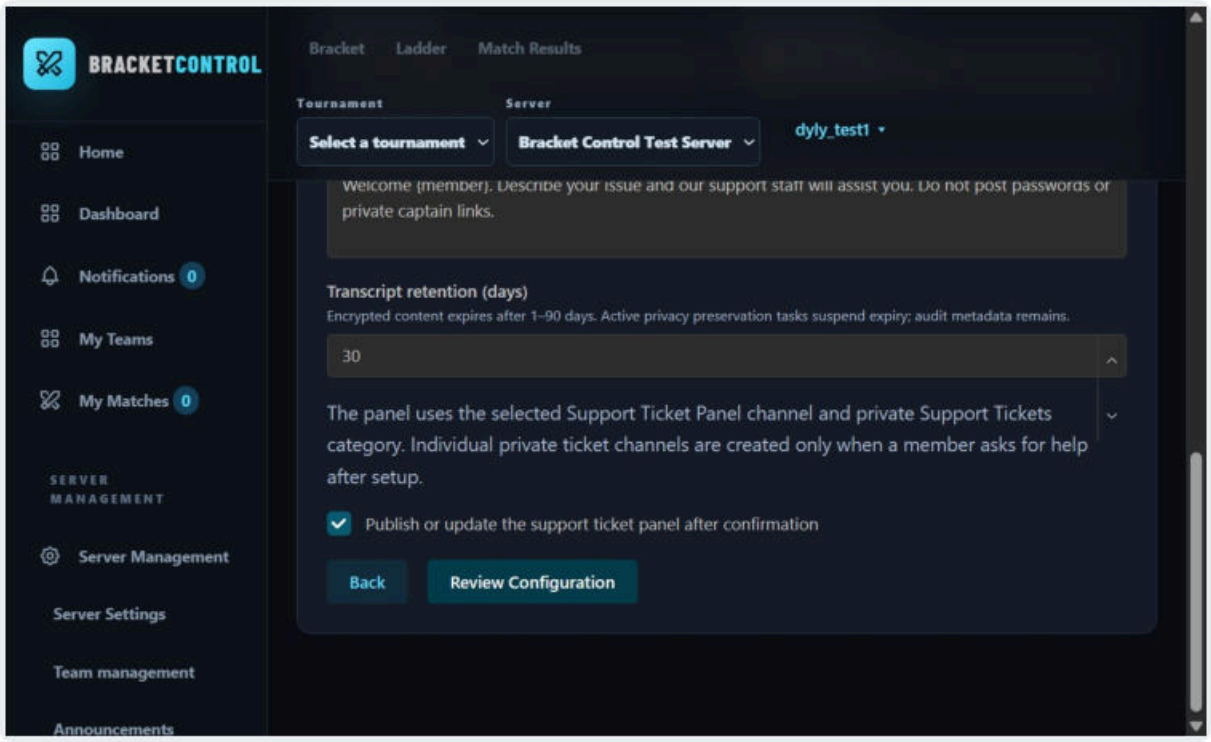

7 Configure support access

If tickets are enabled, choose a Support staff role and review the ticket panel settings. This role grants ticket access, not tournament administration.

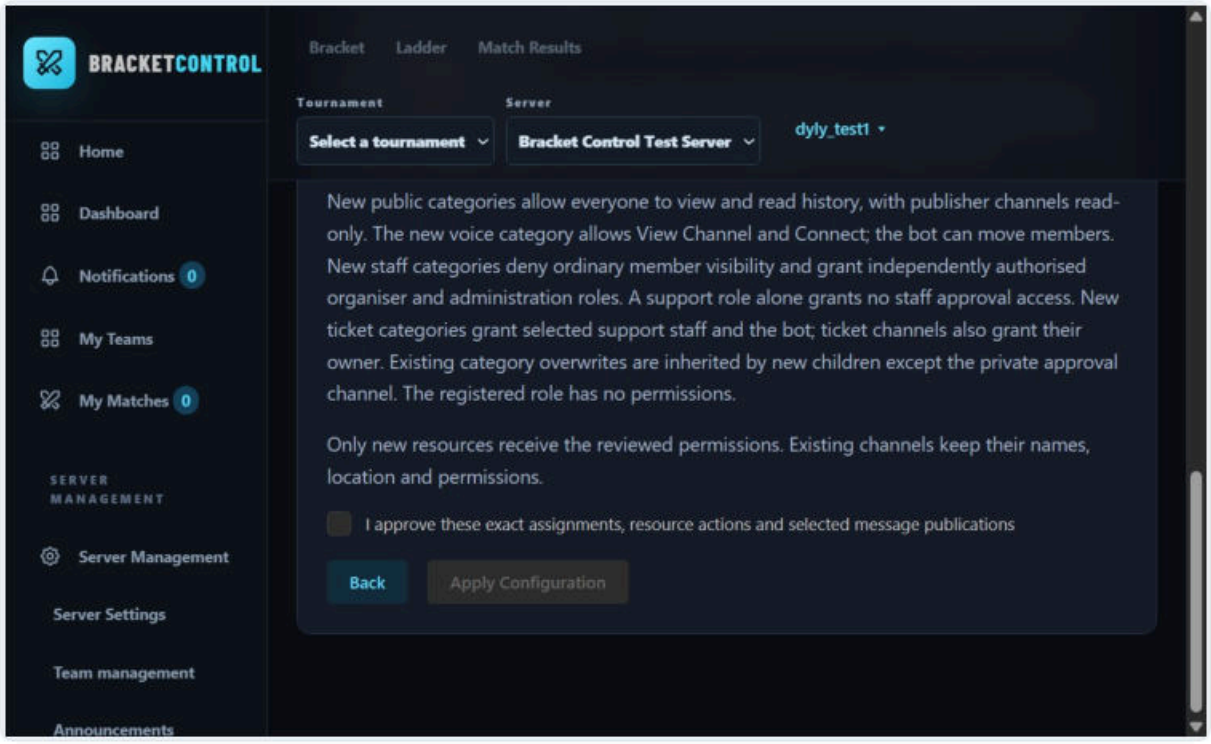

8 Review ticket publication

Confirm the transcript retention period and whether to publish the ticket panel. Select Review Configuration.

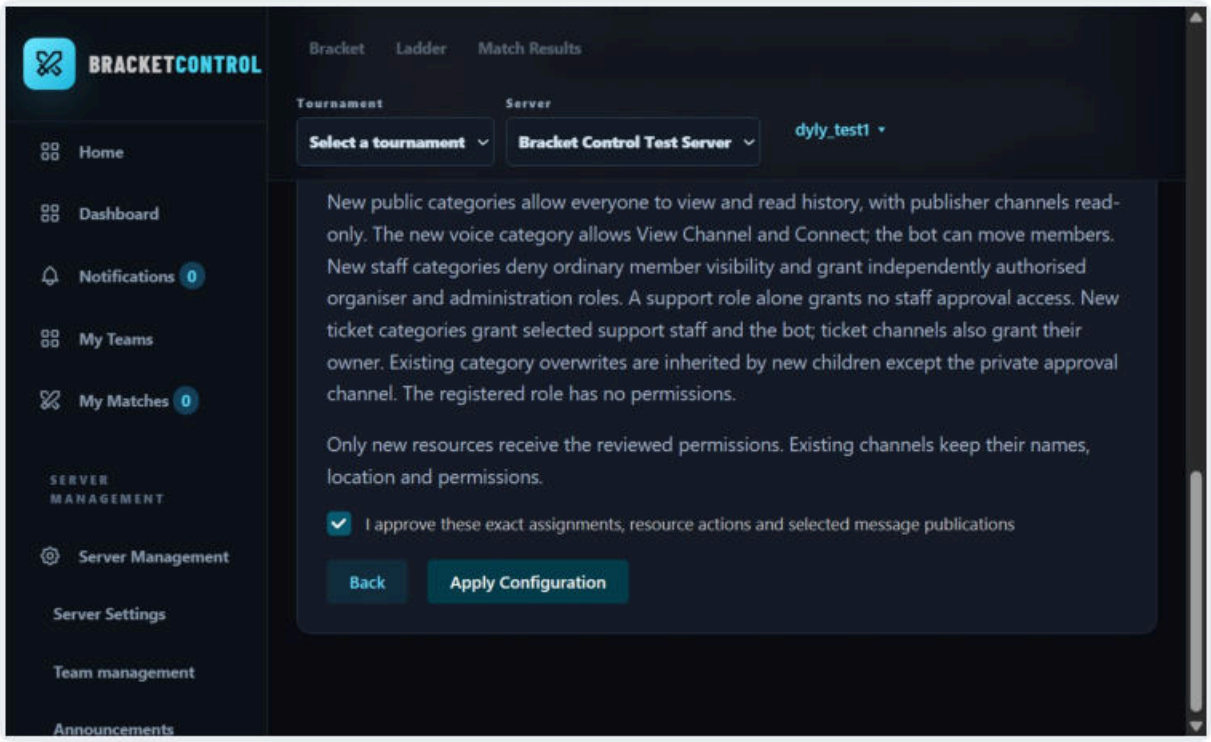

9 Approve the exact configuration

Read the proposed resource and permission changes. Tick I approve these exact assignments... only when correct.

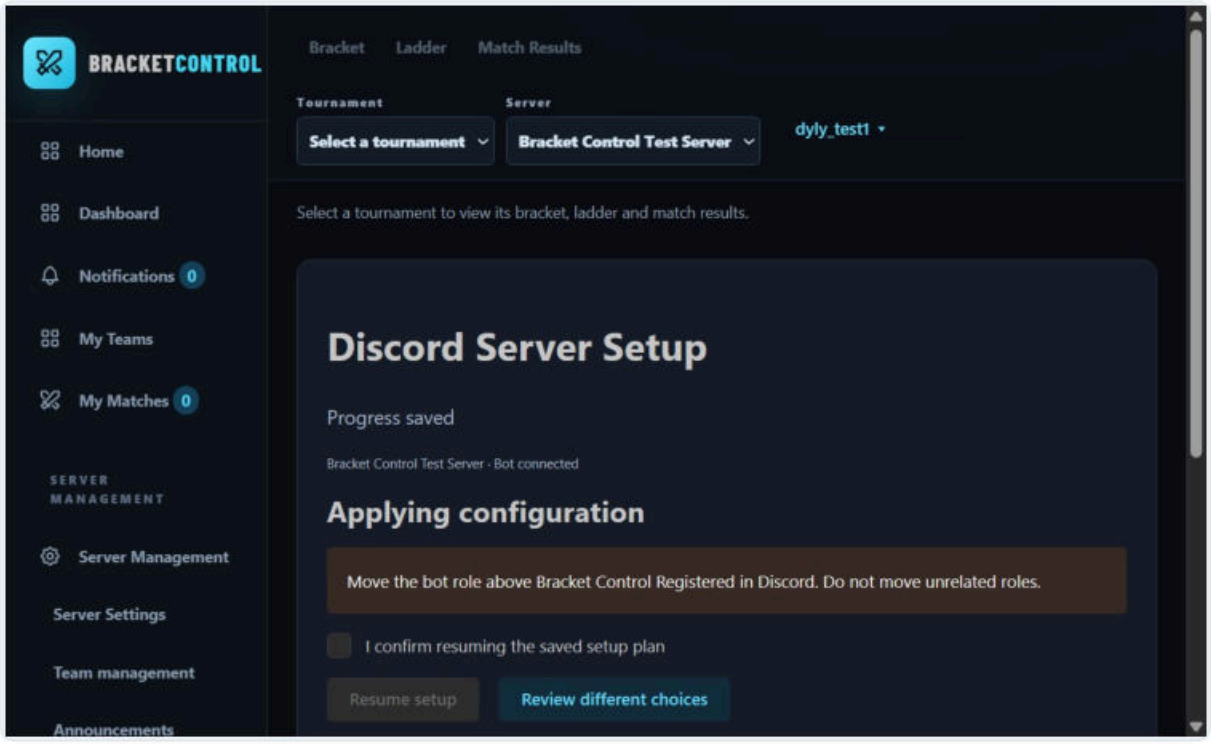

10 Apply the reviewed setup

Select Apply Configuration. Avoid submitting the same action again while the operation is running.

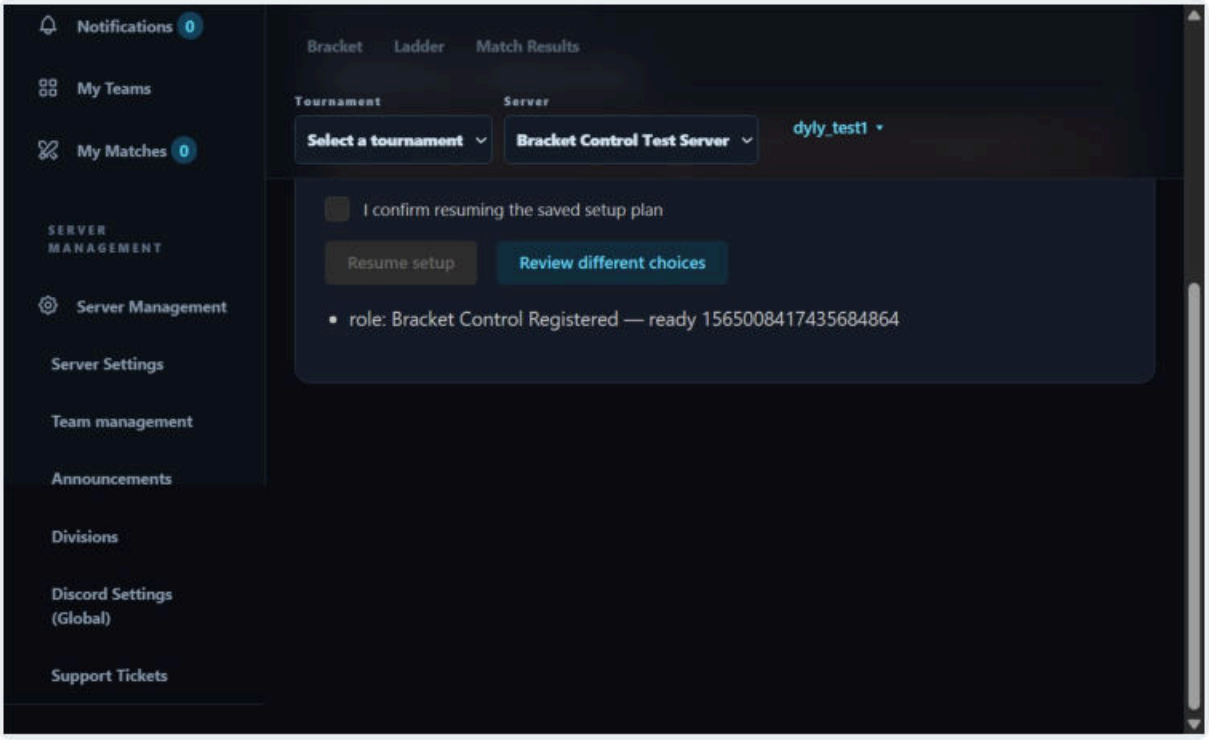

11 Resolve a role hierarchy warning

Only if prompted: in Discord Server Settings → Roles, move the bot role above Bracket Control Registered, then save. Do not move it below first.

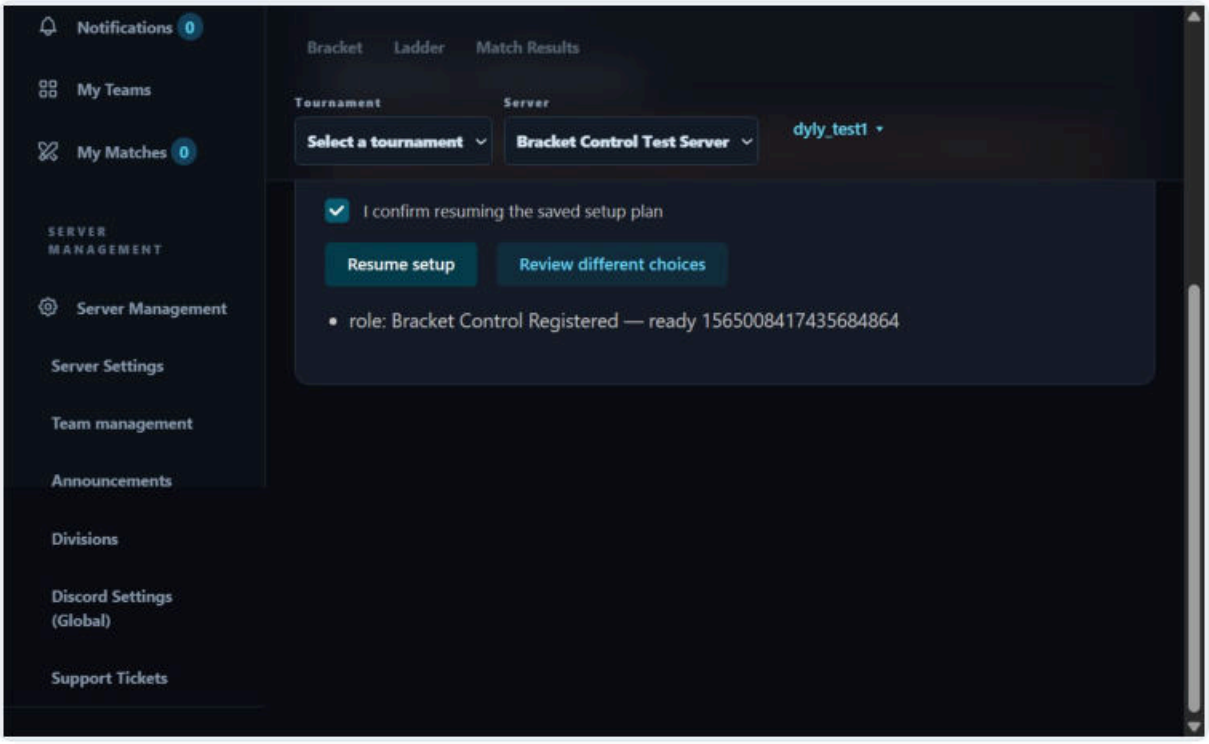

12 Confirm recovery when required

If setup was interrupted, return to the wizard and tick I confirm resuming the saved setup plan.

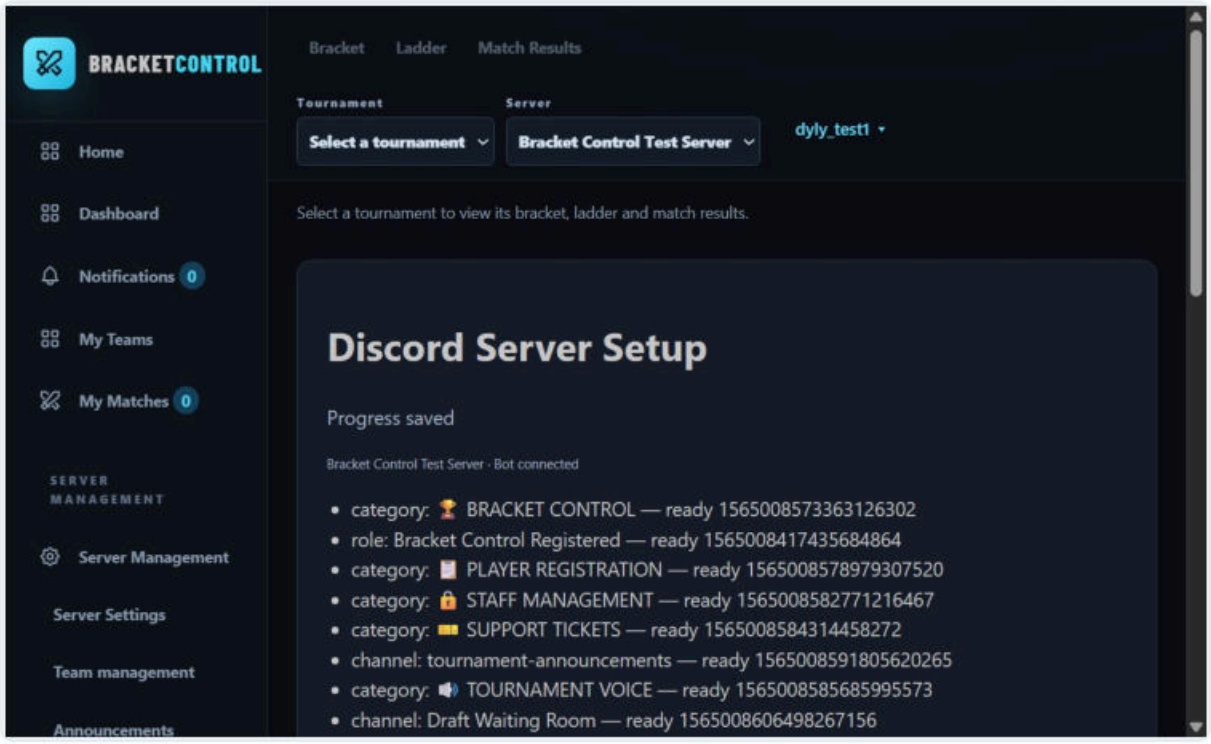

13 Resume an interrupted setup

After resolving the reported issue, select Resume setup. Saved creation receipts allow the wizard to reuse completed resources.

14 Finish and open your dashboard

Once the wizard displays Discord Server Setup Complete, select Go to Dashboard. The source screenshot shows the operation in progress, not a confirmed success screen.

Before leaving setup: Confirm the success message and review the created resources in Discord. If a warning persists, use the wizard's saved-plan recovery rather than starting again.
